

PREVENTING THE SPREAD OF INFECTIOUS DISEASES

Most common one

Most common infectious disease in the world today is Hepatitis B. Infected people never rid themselves of this infection.

Animals can infect you too

Some insects like mosquitoes or ticks are known for spreading diseases. You should also avoid touching wild animals.

Older people are at risk

Infectious diseases are a treat for everyone, yet there are most dangerous for seniors.

Vaccines helps

You can easily protect yourself and people around you from flu, which is one of most common ones infectious disease, by getting a flu shot once a year.
